THE
FUTURE
PEPE

# Table of Contents

Executive Summary

Future Pepe is a meme-token with a purpose. Our time-travelling mascot saw a future where rug pulls and scam coins killed the meme era. He returned to 2025 to steer the culture back on track by giving the crowd two real tools and a loud voice:

- **Survivor Launchpad** — a safety-first launch platform that uses AI and community audits to block bad actors and boost serious builders.

- **AI Market Signals + Trading Assistant** — a plug-and-play dashboard that turns raw on-chain data into clear calls, while teaching holders how to trade smarter.

Holders vote on every big decision, share the revenue those tools generate and earn staking rewards fed by transaction taxes. In short: memes with guardrails and upside.

Vision & Mission

- **Vision:** A decentralised future where internet culture is owned, steered, & monetised by its creators—not centralised platforms.

- **Mission:** Defend meme culture by delivering tools that let creators earn natively in crypto, while redistributing network value back to the community that fuels the hype.

Problem Statement

- **Platform risk:** Centralised socials can demonetise or ban meme accounts overnight.

- **Zero real utility:** 90 % of meme-tokens stop at speculation → no ground-floor yield or creator income.

- **Short life-cycle:** Hype spikes, then liquidity dies once early whales exit.

Solution Overview

Layer	Function	Why it matters
$FPEPE Token	Deflationary ERC-20 · 0.5 % burn + 1 % fee split	Shrinking supply + permanent treasury
Survivor Launchpad	AI Scanner 2.0, audit DAO, insurance pool	Filters scams, feeds revenue to stakers
Memecoin Security Scanner	Rug detector, risk scoring engine, community sentiment overlays	Early alerts & coaching
Affiliate Engine	On-chain ref links & leaderboard	Viral, performance-paid marketing
Staking Vault	Rewards from 1 % fee + utility revenue	Passive yield without Ponzi maths

Tokenomics

Category	%	Tokens	Vesting / Lock-up
Presale	25	250 M	-
Staking Rewards	20	200 M	6-mo cliff > linear 18 mo
Liquidity Pool	15	150 M	12-mo lock (Gnosis timelock)
Ecosystem Dev.	20	200v M	6-mo cliff > linear 12mo
Team	10	100 M	6-mo cliff > linear 12mo
Marketing	10	100 M	6-mo cliff > linear 18 mo

Presale Mechanics

- Structure – 20 stages

- Unsold tokens – burned.

- Accepted – ETH, Base ETH, USDT, USDC.

- Affiliate reward – 12,5 % locked $FPEPE (8-week vest) or 3 % USDC.

Fee Structure (post-launch)

- 0.5 % burn on every transfer.

- 1 % fee split -> 0.5 % to Staking Vault, 0.5 % to Community Treasury.

5.4 Staking Vault

- Go-live – 48 h after TGE.

- Target APR – 20 %-30 %

- Revenue sources:
    (i) 0.5 % fee share
    (ii) 30 % of Launchpad + Signals revenue
    (iii) 25 % of unclaimed airdrops (after 90 d)

Ecosystem & Utilities

Survivor Launchpad: Future Pepe's dedicated launchpad combines AI risk detection, decentralized audit voting, and investor insurance pools to create the safest environment for new meme projects. It directly shares revenue with stakers, aligning incentives between builders and buyers.

Memecoin Security Scanner: A fast-access tool allowing users to scan any memecoin contract for hidden risks, whale movements, and sentiment flags. It empowers meme investors to make smarter decisions and defends meme culture from predatory launches.

- **Survivor Launchpad (beta Q4 2025) –** Scanner open-sourced September 2025; test-net two weeks before main-net; insurance pool contract public.

- **Memecoin Security Scanner (alpha Q1 2026) –** Demo dashboard January 2026; community risk voting live.

- **Architecture:** Subsquid data indexing, Rust microservices, React front-end, GPT analysis layer.

Roadmap

Quarter	Milestone
Q2–Q3 2025	Presale > Coinsult & SolidProof audits > TGE > Staking Vault live
Q4 2025	Survivor Launchpad beta · DAO Lite live · CEX 1# listing
Q1 2026	Cross-chain bridge (Base & Solana) · CEX 2# listing

Governance & Treasury

Snapshot DAO Lite (1 token = 1 vote);

- 1 % proposal threshold
- 4 % quorum
- 72 h vote
- Presale Event
- 24 h timelock

Quarterly on-chain votes direct the Community Treasury.

Funds-Usage Transparency

Use Case	%	Rationale
Development	50	12-mo lock (Gnosis timelock)
Liquidity	20	Deep LP; 12-mo lock
Marketing	15	Performance-based campaigns
Operations	10	Salaries, infra, monitoring
Legal & Compliance	5	MiCAR filing, audits

Funds-Usage Transparency

- Coinsult & SolidProof reports public at presale launch
- Token contract timelocked until hash verified on-chain
- Anti-Bot / Anti-Snipe – Gas-limit; max-tx 0.25 % circ supply (doubling every 5 min); blacklist removed after 1 h

Conclusion

Future Pepe combines meme virality with sustainable, revenue-sharing utilities. Transparent tokeno mics, audited contracts, aim to set a new gold standard for memecoins—one that rallies at launch and endures beyond the hype.

- Realistic staking — 20-30 % APR
- Fair supply — 25 % sold in presale, tight team vesting
- Built-in deflation & utility — burn on every trade, fees feed real products
- Deep liquidity — 15 % of supply locked for a year to keep spreads low
- Price-step presale with modest increases
- Dump protection at launch plus transparent DAO control of the treasury

Future Pepe sets a higher tokenomics standard—sustainable maths, genuine use cases, and clear, verifiable rules.
